

EMPOWER THE STATISTICS

33% of women suffer from urinary incontinence

75% of women experience decreased sexual sensation

50% of women experience postmenopausal atrophy

100% of women experience abdominal muscle separation during pregnancy

MANY WOMEN DIFFER ISSUES ONE SOLUTION

As we age, our bodies go through major life events such as childbirth, our pelvic floor can lose strength and suffer. Because of this, issues like urinary incontinence can arise. Urinary incontinence is a common issues where your bladder “leaks” when you laugh, sneeze, cough, run or jump. Often, women who have never had children will suffer from similar symptoms.
